

FLEXIBLE DRAINING MATS

The draining mat is an essential part of the mould or block-mould / draining mat / tray assembly.

Generally fastened to the trays using pins, draining mats are by nature rather rigid, and perfectly fulfil their function of draining, and of maintaining the curd inside the moulds.

The mats can be delivered with custom positioned fastening pins on the trays.

They come in Servi blue, soft blue, and pastel green, other colours are available on special order.

For some applications, it is useful to be able to provide the mat with flexibility, for example in order to remove large-size cheeses. In some cheese factories, this flexibility is still obtained through the use of wooden mats of the straw type.

The version of the flexible mat proposed by Servi Doryl, meets this use. The mats are identical in dimensions and construction with conventional mats, but are produced from a food-quality material that provides them with both flexibility and resistance.
